PROFESSIONAL SUMMARY

Results-driven Software Engineer with 2+ years of experience delivering scalable fintech products at ZET. Specialises in React Native & Expo for cross-platform mobile apps, Next.js / Node.js / Express.js for full-stack web, and Spring Boot for backend services, backed by MySQL and NoSQL databases and AWS / GCP / Cloudflare cloud infrastructure. Creator of Amrutkaal.com, an independent full-stack product serving astronomical Panchang data for 546,462+ Indian cities and 162,646+ cities across 84 countries.

TECHNICAL SKILLS

Mobile (Primary): React Native, Expo SDK, Android (Java/Kotlin), iOS, Native Modules, React Query

Frontend: Next.js, React.js, Redux.js, TypeScript, HTML/CSS

Backend: Node.js, Express.js, Spring Boot, Spring Security, REST API Design

Databases: MySQL, NoSQL (MongoDB / Redis), OpenJPA

Cloud & Infrastructure: AWS, GCP, Cloudflare, CI/CD (GitHub Actions)

Dev Tools: Git, GitHub, Jira, Figma, Sentry, Freshdesk

Other: Python, Swiss Ephemeris, Web Design, Custom Software Development

EXPERIENCE

ZET — Bengaluru, Karnataka, India

Software Engineer (Jun 2025 – Present)

Associate Software Engineer (Dec 2024 – Jun 2025)

Software Engineer Intern (Jun 2024 – Dec 2024)

Full-time | Total tenure: 2 years 1 month

ZET is a fintech super-app offering UPI payments, digital credit cards (IOB, DCB, SBM), fixed deposits, and lending, built on a React Native (Expo SDK) + Spring Boot stack.

Mobile Development (React Native / Expo)

- Built and shipped UPI features end-to-end: Set PIN Headless flow, UPI Onboarding enhancements, Deferred Deeplinks, Scanner Shortcut/Widget, Lite autopay, and default payment mode selection.
- Developed the Multi-banking module (bank selection UI, multibanking enhancements, and fallback screens), enabling users to manage multiple bank accounts in-app.
- Delivered ZET Cash post-disbursal changes, plus ZET Plus UAT and 7-day free trial experiments, supporting product monetisation and retention.
- Implemented a new Referral Landing Page and Referral invite screen using a Figma-to-code workflow, driving user acquisition.
- Integrated Karix SMS and MixPanel analytics for ZET Card users, enabling data-driven product decisions.
- Integrated Sentry (@sentry/react-native) for real-time error tracking and crash monitoring across iOS and Android.

Native Android Development (Java / Kotlin)

- Wrote custom Native Modules bridging React Native to Android platform APIs, covering SMS, foreground services, and intent activities.
- Contributed to packages/zet-security/, a custom security package for native-level protections.
- Worked with the Gradle build system for Android, maintaining 13 Java and 12 Kotlin native module files.

Backend & API (Spring Boot / REST)

- Structured 87 API feature modules (axios functions to React Query hooks to types) across src/api/, ensuring consistent API contract design.
- Contributed to IOB & DCB bank integrations: VKYC onboarding, SIM binding skip, card activation, IOB FD payment, and IOB creation API failure monitoring.

- Fixed a CMS vulnerability and triaged/resolved production issues spanning UPI bugs, API failures, card errors, and critical endpoint high-error-rate alerts.

CI/CD & Infrastructure

- Maintained GitHub Actions workflows for automated app builds and iOS build pipelines.
- Worked within Agile/Scrum using Jira and Figma.

PERSONAL PROJECTS

Amrutkaal — amrutkaal.com (Founder & Developer | 2026 – Present)

A free, ad-free, full-stack daily Hindu Panchang and Vedic calendar web application built from astronomical first principles.

- Scale: Panchang for 546,462 Indian cities and 162,646 cities across 84 countries, each computed individually from local sunrise/sunset/timezone, never copied from a reference city.
- Astronomical engine: Integrated Swiss Ephemeris (pyswisseph) on NASA JPL DE431 equations with Lahiri ayanamsa (India's official standard since 1955, same basis as the Rashtriya Panchang); Tithi/Nakshatra/Yoga/Karana derived from sidereal longitudes via bisection search, accurate to ± 1 minute, with sunrise/sunset to ± 30 seconds (NOAA civil method), validated against Drik Panchang samples.
- Daily Panchang & Muhurat: Tithi, Nakshatra, Yoga, Karana, Vara, Rahu Kaal, Choghadiya, Abhijit Muhurat, auspicious Muhurat windows, and audio Panchang.
- Kundli & Matching: Free Janma Kundali (Lagna + 12 houses, 9 grahas, North/South Indian and Navamsa charts, 120-year Vimshottari Dasha, Ashtakavarga, plus Manglik and Kaal Sarp dosha) and 36-point Gun Milan Kundli Matching — all chart math runs in the browser, so name, date, time, and place are never transmitted or stored.
- Additional tools: Rashmi Calculator (moon sign / birth nakshatra), Daily Rashifal, Tithi Calculator, Baby Names by Nakshatra, multi-faith Festival calendar (2026–2030), Solar/Lunar Eclipse (Graham) data, Namaz/Prayer times, and temple, Aarti, Chalisa & Mantra resources.
- Worldwide & multilingual: Dedicated Panchang for the US, UK, Canada, UAE, Australia, Singapore, Malaysia, New Zealand, Nepal, and Sri Lanka; English and Hindi UI with typo-tolerant city search for India and worldwide.
- Tech stack: Next.js, Node.js, Python, Swiss Ephemeris (pyswisseph), Cloudflare, Geolocation API, i18n.

EDUCATION

Masai School | Computer Programming | Apr 2022 – Dec 2024

Gulzar College of Engineering | BTech, Electrical and Electronics Engineering | 2018 – 2022
